

# Environment

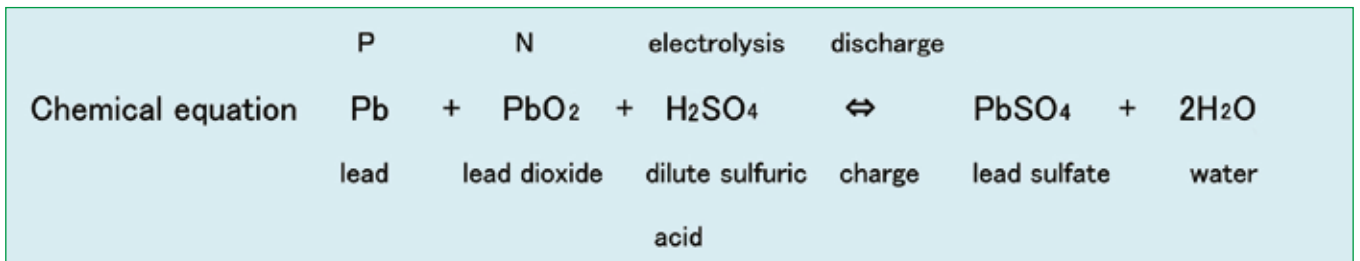

**A, ITC is an agency of B.R.S.Co., (Ishikawa Pref. Japan) which is a pioneer of Battery Reusing System (BRS).**

There are huge lead-battery for the industrial use in the world.

These lead-battery have been wasted as run out of life though its life is still remained.

Our policy is an 'extension of life and use up 100% the battery without wasting'. BRS (Patented) is the best way to protect the environment of earth and to reduce the cost.

**The method is as below;**

**B, Recycle from wasted polyester yarn to new recycled fiber, and from wasted nylon yarn to new nylon resin**

•Wasted polyester yarn to recycled short fiber

Wasted polyester yarn → Granule → Melting → Extruder → Drawing → Crimp → Cut → Short fiber → Needle punching ---- for Geotextile, Mobile textile,

•Wasted nylon yarn to recycled resin

Wasted nylon yarn → Granule → Extruder → Pellet ----for Plastic products
